PLUMBING NOTES

1. PLUMBING CONTRACTOR SHALL REVIEW THE MANUFACTURER'S DATA SHEETS IN THE SINGER EQUIPMENT COMPANY CUT BOOK FOR DETAILS THAT APPLY TO THE PLUMBING CONTRACTOR'S SCOPE OF WORK ON THE PROPER INSTALLATION OF THE FOODSERVICE EQUIPMENT.
2. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL SHUT-OFF VALVES ON THE INLET SIDE OF THE HOT & COLD WATER LINES SERVING EACH EQUIPMENT ITEM.
3. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL PRESSURE REDUCING VALVES ON THE MAIN HOT & COLD WATER SUPPLY TO THE FOODSERVICE AREA SERVING ALL OF THE FOODSERVICE EQUIPMENT IF THE WATER PRESSURE EXCEEDS 50 POUNDS FLOW PRESSURE.
4. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL A PRESSURE REDUCING VALVE FOR THE WATER SUPPLY TO THE DISHMACHINE (OR ITS AUXILIARY HOT WATER BOOSTER) IF THE WATER PRESSURE EXCEEDS 25 POUNDS.
5. PLUMBING CONTRACTOR SHALL PROVIDE ALL FITTINGS AND MAKE ALL INTERCONNECTIONS BETWEEN BOOSTER HEATER AND DISHMACHINE, AS WELL AS STEAM GENERATORS AND STEAM COOKING EQUIPMENT.
6. PLUMBING CONTRACTOR SHALL PROVIDE 140 DEGREE WATER FOR THE HOT WATER SUPPLY TO THE DISHMACHINE. SEE ARCHITECT'S DRAWINGS FOR HOT WATER TEMPERATURE TO SINKS AND OTHER EQUIPMENT IN THE KITCHEN.
7. METAL PIPING (COPPER OR GALVANIZED) FOR DRAIN LINES IS RECOMMENDED ON EQUIPMENT THAT DISCHARGES HOT WATER, SUCH AS STEAMERS & DISHWASHERS. PVC PIPING IS NOT SUITABLE FOR THESE CONDITIONS AS IT TENDS TO SOFTEN OR CRACK.
8. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL GREASE INTERCEPTOR(S) AS REQUIRED BY LOCAL CODES AND SHOWN ON THE ARCHITECTURAL DRAWINGS.
9. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL FLOOR SINKS & DRAINS AS PER LOCAL CODES, AUTHORITIES HAVING JURISDICTION, AND OWNER REQUEST.
10. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL ALL DRAIN PIPING FROM EVAPORATOR COIL(S) IN THE WALK-IN COOLER & FREEZER TO THE NEAREST FLOOR DRAIN. PLUMBING CONTRACTOR SHALL PROVIDE AND INSTALL HEAT TAPE FOR DRAIN PIPE IN THE WALK-IN FREEZER.
11. PLUMBING CONTRACTOR SHALL PROVIDE AND INSTALL ALL VACUUM BREAKERS, CHECK VALVES, AND ANY OTHER FITTINGS AS REQUIRED BY INSPECTORS OR AUTHORITIES HAVING JURISDICTION FOR FOODSERVICE EQUIPMENT AND/OR BEVERAGE DISPENSERS.
12. PLUMBING CONTRACTOR SHALL INSTALL MECHANICAL GAS SOLENOID VALVE (PROVIDED BY SINGER) IN THE MAIN GAS LINE FEEDING ALL GAS COOKING EQUIPMENT AND PRIOR TO ANY TEES OR GAS LOOP. MECHANICAL GAS SOLENOID VALVE SHALL BE INSTALLED IN ACCESSIBLE CEILING SPACE OR BELOW FLOOR WITH ACCESS TO VALVE.
13. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL A PRESSURE REGULATOR TO THE MAIN GAS SUPPLY TO THE FOODSERVICE AREA, IF THE GAS PRESSURE EXCEEDS 14" WATER COLUMN (1/2 LB). THE PRESSURE REGULATOR MUST BE INSTALLED PRIOR TO CONNECTING GAS SUPPLY TO ANY FOODSERVICE EQUIPMENT. EXCESSIVE GAS PRESSURE CAN DAMAGE THE EQUIPMENT AND CAUSE PERSONAL INJURY.
14. PLUMBING CONTRACTOR SHALL PROVIDE & INSTALL APPROPRIATE WATER CONDITIONING SYSTEMS ON THE MAIN WATER SUPPLY TO THE FOODSERVICE AREA IF THE WATER EXCEEDS TEN GRAINS OF HARDNESS, EXCESSIVE LIME, IRON, ALKALINE, ETC. ALL WATER CONDITIONING EQUIPMENT SHALL BE SERVICED AND MAINTAINED BY THE OWNER'S FACILITY MANAGEMENT TEAM.

Direct Fired Profile Plate Specifications: Description: Direct fired burners shall have patented (US Patent No.: US6629523B2), self-adjusting profile plates designed to ensure proper air velocity and pressure drop across the burner. Profile plates shall allow burners to achieve clean combustion by limiting by-product levels to a maximum of 5ppm of carbon monoxide (CO), and 0.5ppm of nitrogen dioxide (NO2). units shall be configured with the blower mounted downstream of the burner. This arrangement will ensure a consistent airflow, regardless of inlet air temperature.
Application: Spring-loaded burner profile plates are engineered to automatically react to the momentum of a fresh air stream, without the need for any motors or actuators to mechanically adjust them. With this feature, all DF units are designed for demand control ventilation (DCV) requirements.
Certifications: All profile plate assemblies shall be included in the DF unit's ETL listing and comply with combined safety standards ANSI Z83.4 and CSA 3.7 (non-recirculating DF heaters) and ANSI Z83.18 (recirculating DF heaters).
General Construction: -Profile plates shall be formed from G90 galvanized steel. -Profile plates shall vary in size per unit. -Profile plates shall be mounted along the same plane as the discharge of the burner. -Design shall incorporate properly torqued, permanently mounted spring hinges. -Spring hinges shall be made from plated steel.

Demand Control Ventilation Hood Control Panel Specifications:

- Controls shall be listed by ETL (UL 508A) and shall comply with demand ventilation system turndown requirements outlined in IECC 403.2.8 (2015).
- The control enclosure shall be NEMA 1 rated and listed for installation inside of the exhaust hood utility cabinet. The control enclosure may be constructed of stainless steel or painted steel.
- Temperature probe(s) located in the exhaust duct riser(s) shall be constructed of stainless steel.
- A digital controller shall be provided to activate the hood exhaust fans dynamically based on a fixed differential between the ambient and duct temperatures sensors. This function shall meet the requirements of IMC 507.1.1.
- A digital controller shall provide adjustable hysteresis settings to prevent cycling of the fans after the cooking appliances have been turned off and/or the heat in the exhaust system is reduced.
- A digital controller shall provide an adjustable minimum fan run-time setting to prevent fan cycling.
- Variable Frequency Drives (VFDs) shall be provided for fans as required. The digital controller shall modulate the VFDs between a minimum setpoint and a maximum setpoint on demand. The duct temperature sensor input(s) to the digital controller shall be used to calculate the speed reference signal.
- The VFD speed range of operation shall be from 0% to 100% for the system, with the actual minimum speed set as required to meet minimum ventilation requirements.
- An internal algorithm to the digital controller shall modulate supply fan VFD speed proportional to all exhaust fans that are located in the same fan group as the supply fan.
- The system shall operate in PREP MODE during light cooking load or COOL DOWN MODE when sufficient heat remains underneath the hood system after cooking operations have completed. Operation during either of these periods will disable the supply fans and provide an exhaust fan speed that is equal to the minimum ventilation requirement.
- A digital controller shall disable the supply fan(s), activate the exhaust fan(s), activate the appliance shunt trip, and disable an electric gas valve automatically when fire condition is detected on a covered hood.
- A digital controller shall allow for external BMS fan control via Dry Contact (external control shall not override fan operation logic as required by code).
- An LCD interface shall be provided with the following features:
  a. On/Off push button fan & light switch activation
  b. Integrated gas valve reset for electronic gas valves (no reset relay required)
  c. VFD Fault display with audible & visual alarm notification
  d. Duct temperature sensor failure detection with audible & visual alarm notification
  e. Mis-wired duct temperature sensor detection with audible & visual alarm notification
  f. A single low voltage Cat-5 RJ45 wiring connection
  g. An energy savings indicator that utilizes measured kWh from the VFDs

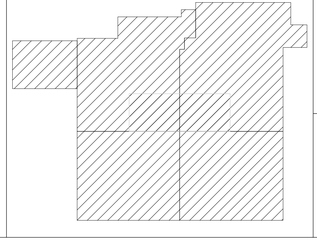

TYPICAL HOOD CONTROL PANEL INSTALLATION

Sequence of Operations:

The hood control panel is capable of operating in one or more of the following states at any given time:

- Automatic: The system operates based on the differential between room temperature and the temperature at the hood cavity or exhaust duct collar. Fans activate at a configurable temperature differential threshold. Depending on the job configuration each fan zone can be configured as static or dynamic. These terms refer to whether a variable motor (such as EC Motors or VFD driven motors) modulate with temperature. If the panel is equipped with variable speed fans and the zone is defined as "dynamic", these will modulate within a user-defined range based on the temperature differential. Panels equipped with variable speed fans and a fan zone defined as "static", fans will run at a set speed calculated for the drive. Demand control ventilation systems are capable of modulating exhaust and make up air fan speeds per the requirements outlined in IECC 403.2.8.
- Manual: The system operates based on human input from an HMI.
- Schedule: A weekly schedule can be set to run fans for a specified period throughout the day. There are three occupied times per day to allow for the user to set up a time that is suitable to their needs. Any time that is within the defined occupied time, the system will run at modulation mode and follow the fan procedure algorithm based on temperature during this time. During unoccupied time, the system will have an extra offset to prevent unintended activation of the system during a time where the system is not being occupied.
- Other: The system operates based on the input from an external source (DDC, BMS or hard-wired interlock)

NOTES

STANDARD NOTES
To prevent condensation, a minimum 2" from the walk-in exterior surface is required. High humidity conditions may require force ventilation in addition to clearance.

Installation site floor must be true and level within 3/16" per 10' or additional costs may be incurred.

Imperial Brown's sliding and vertical lift doors shall not be considered means of egress. Check code egress requirements for your application.

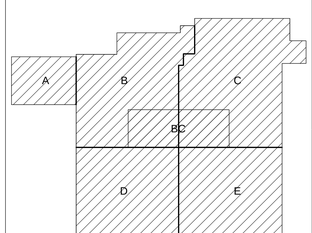

RECESSED PIT
Recess plan is provided to set min. size to allow panel installation. Recess depth, concrete floor above and below insulation, design, reinforcement, thickness & construction of concrete should be designed by a Qualified Professional Engineer familiar with cold storage design, the site conditions and end users application. See project contract documents. All concrete and excavation work & design is by others.

ELECTRICAL
Field electrician to verify maximum acceptable load for light switches.If load is too high, then relay type controls should be used.
After wiring devices, ALL conduits must be sealed to stop moisture transfer through electrical raceways.
Failure to seal device per NEC codes WILL VOID WARRANTY.

NSF LABEL
N.S.F. LISTED (STD #7)
